

Proofreading Task 5

The Golden Gate Bridge

Once called "the bridge that couldn't be builded," today it is one of the seven wonders of the modern world. This magnificent span, perhaps San Francisco's most famous landmark, opened in 1937 after a four-year struggle against relenting winds, fog, rock and treacherous tides.

The Golden Gate Bridge is one of the most famous and beautiful bridges in the world because of its spectacular location, graceful lines, Art Deco detailing, and emblematic color. With towers extended 700 feet into the sky and over 100 feet beneath the Bay, the bridge is also an engineering marvel. You may walk or bike the entire length of the 1.7-mile-long bridge, but dressed warmly!

Technically, the color of the bridge is "International Orange," but whatever it is, it's an eye-grabber, whether you're driving, walking, or pedaling across the 2737-meter span. Look up for a remarkable view of the bridge's underbelly, a spectacular network of massive girders, enormous columns, and impressive cables.

The Golden Gate is at its most enchanting in the morning when the bridge is often shrouded in mist. But the bridge is also alluring at night when the lighting makes it seem as if the spires of the towers dissolve in the darkness.
