Plant Detectives

Take some time to look at the natural world around you. Plants come in all sorts of sizes, shapes and colours.

How many different types of plants and trees can you find in your own garden, or local park?

What do plants need to help them grow?

Do all plants need the same things?

What is the strangest place that you can find a plant growing?

How do you think it got there?

Remember

Do not put any plant in your mouth. Wash your hands thoroughly when you have finished exploring.

Key science skills

Curiosity, observation, patience,

Working in science

The diverse and rapidly changing world of plants, food and farming has thousands of fantastic STEM career opportunities. Whether you are interested in robotics, animal welfare, engineering, horticulture, business or food technology, there is a career for you. Visit: fginsight.com/thisisagriculture
